Date: Wednesday, November 20

Time: 5:00pm -5:45pm

Location: Bulger 216

Learn about:

- ◆ Utilant's data science journey
- ◆ The job market and future outlook
- ◆ Solving use cases in InsurTech

About the Speaker:

Jeff Staniszewski is the VP of Engineering at Utilant with 10+ years of experience and a Bachelor of Science in Computer Information Systems from Buffalo State College. Professional career includes leading and operating in all stages of the Software Development Life Cycle (SDLC) for a business management consulting firm, internet marketing service provider, environmental engineering firm, and financial institution. Specializing in the delivery of state of the art, maintainable, cost effective software solutions through daily collaboration with software engineers, project managers, executives, and external clients.

About the Firm:

Utilant is one of the fastest growing global InsurTech software companies today, creating modern and intelligent loss control technology for Property and Casualty insurance companies. Utilant's Loss Control 360 is the "best-in-class" Loss Control Survey Management Platform for Global P&C and top North American risk engineering companies, establishing a hub connecting insurance core systems, inspection firms, and InsurTechs to provide automation to identify, manage and reduce risks. Utilant's software development is centralized out of Buffalo, NY with robust professional service implementation capabilities, as well as specialized customer-centric resources that partner closely with client or system integrators.
